

Lumenplay®

APP-ENABLED LIGHTS

Firmware Update Guide

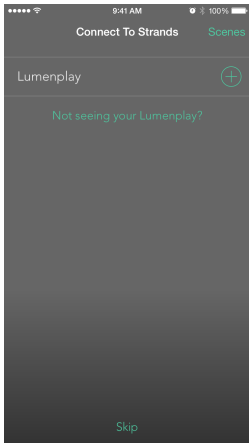

Updating your Lumenplay® Controller to the newest Firmware is an easy and quick process. Closely follow the steps below to ensure a complete, successful update.

Preparation | Before you Begin

1. Plug-In a Lumenplay® Controller*
2. Connect Controller to 1 Light String
3. Download latest Lumenplay® App from iOS App Store

*IMPORTANT

Ensure no other Lumenplay® Controllers are plugged-in and in-range. You can check by opening the App. Make sure only one Controller is visible.

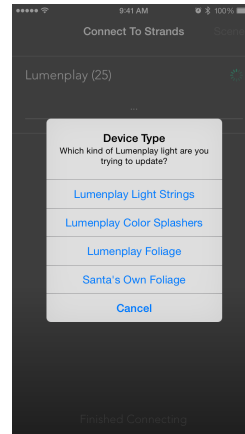

Step 1 | Open App, Press "+"

Open the Lumenplay® App
Make sure Bluetooth is Turned On (not paired)

1 "Lumenplay" should be available

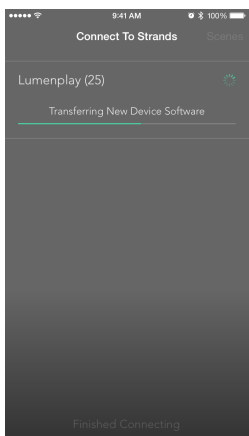

Press the "+" next to Lumenplay to establish connection

Step 2 | Accept & Choose

You will be prompted that you must update your Firmware, great! Press "Yes"

You may be prompted to select your product (if not, keep going). Choose the option that best describes your Lumenplay® product.

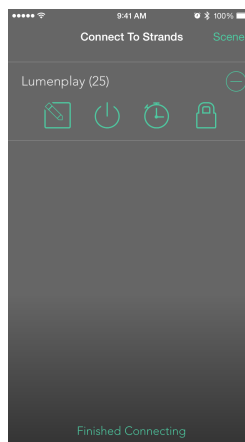

Step 3 | Allow Update to Run

Make sure to keep your Smart Device near the Controller.

DO NOT LEAVE THIS SCREEN.

Wait until the new firmware is loaded onto your Controller.

This should take about 90 sec.

Step 4 | Re-Connect to Test

Once the Firmware Update is complete, you will return to the Original Screen.

Press the "+" next to Lumenplay to connect to the Controller.

Press "Scenes" in the top right.

Play around with the App to make sure lights are responding properly.

Congratulations! Once you have successfully connected and controlled the Lumenplay® lights, your work is done.

If something goes wrong in the process, try it again.

If "Lumenplay +" does not appear, then please refer to the Lumenplay® Troubleshooting Guide for further instructions.
